PROFESSIONAL SUMMARY

Software Developer with 2+ years of experience building enterprise web applications, Trade ERP systems, GST/e-Invoice integrations, and AI-powered accounting solutions. Experienced in Vue.js, JavaScript, Phoenix Framework, Elixir, PostgreSQL, MySQL, and REST APIs. Strong background in workflow automation, API integration, multi-module business applications, database optimization, and translating business requirements into production-ready software.

CORE TECHNICAL SKILLS

- **Languages:** JavaScript, Elixir, SQL
- **Frontend:** Vue.js, HTML5, CSS3, Bootstrap
- **Backend:** Phoenix Framework, REST APIs
- **Databases:** PostgreSQL, MySQL
- **Concepts:** ERP, SaaS, AI-assisted Accounting, GST, e-Invoice, Workflow Automation
- **Tools:** Git, VS Code, Postman

PROFESSIONAL EXPERIENCE

Software Developer | Tectalik – From Human To AI

March 2024 – Present

- Designed, developed, and maintained enterprise Trade ERP modules supporting day-to-day business operations.
- Built responsive user interfaces using Vue.js and integrated secure REST APIs with Phoenix backend services.
- Developed business workflows covering purchasing, sales, inventory management, trade operations, and reporting.
- Implemented government-compliant e-Invoice integration with API providers, including acknowledgement processing and error handling.
- Contributed to GST-related accounting functionality and tax workflow automation.
- Currently developing Tiybe, an AI-powered cloud accounting platform with modules for organisations, subscriptions, accounting, taxation, and business management.
- Worked extensively with PostgreSQL and MySQL for schema design, query optimization, and data management.
- Collaborated with product managers, QA engineers, and backend developers throughout the software development lifecycle.
- Improved maintainability through reusable Vue components and modular application architecture.
- Resolved production issues, implemented enhancements, and participated in feature planning.

KEY PROJECTS

- **Tiybe – AI Accounting Platform:** Developing a multi-tenant SaaS accounting application featuring AI-assisted accounting workflows, subscription management, organisation management, taxation modules, dashboards, and secure backend APIs.
- **Trade ERP Platform:** Developed enterprise ERP features for trade management including purchasing, sales, inventory, reporting, and workflow automation with REST API integrations.
- **GST & e-Invoice Integration:** Implemented invoice generation, API integration, acknowledgement processing, and compliance-related workflows for business users.
- **Sign Language Translation System (Academic):** Built a Django-based application that converted speech/text into sign language using NLP and speech processing.

KEY ACHIEVEMENTS

- Delivered enterprise features used in real-world business applications.
- Built scalable frontend modules and integrated backend APIs.
- Contributed to AI-powered accounting software development.
- Implemented compliance-focused GST and e-Invoice functionality.
- Worked across frontend, backend integration, and database optimization.

EDUCATION

B.Tech – Information Technology

New Prince Shri Bhavani College of Engineering | 2020 – 2024 | CGPA: 8.29
